Services for teaching, research and co-innovation

SAP University Alliances is a global program that provides more than 3,000 universities with free SAP software licenses for academic purposes. Within this program the SAP University Competence Centers (UCC) host SAP solutions for teaching, research and co-innovation.

In addition UCCs develop and manage academic teaching materials to assist lecturers and researchers. While UCCs assure 24/7 availability of complex system landscapes and support users closely, faculty members can fully concentrate on their core competences: teaching and research.

By using our scenario-based and practical curricula on latest SAP solutions, lecturers and students can reach their full potential. Our comprehensive teaching materials consist of presentations, case studies and hands-on exercises. Additional teaching tools facilitate continuous student assessments and foster group discussions.

Our experts can support you through all phases.

Game-based Learning with ERPsim

Deviate from usual course formats and motivate through Serios Gaming! With ERPsim, students run a virtual company in a competitive market. In this way, business processes are taught playfully in a real SAP S/4HANA system.

Participants form competing teams and take on different roles to make the best possible decisions and analyze them (business analytics). To interact with the system, a realistic mix of self-developed and native Fiori apps and Web GUI transactions is used.

The Games

There are is total of 9 games with varying levels of difficulty in the four areas of manufacturing, logistics, sales, and distribution. The system simulates a market in each of these games and the players have to react to external influences accordingly. Simple tasks are automated since the focus lies on decision making and collaboration among players. Time is also a critical factor, as the game takes place in a dynamically accelerated environment where a day in the game is equivalent to only a few minutes in reality - depending on the instructor’s setting.

The time pressure as well as the competition encourage players to react quickly to changes in the market and thus make effective decisions. Since every action in the system triggers further processes and causes direct feedback, interdependencies and dynamics within a company are understood much better - business processes are taught in an integrative and realistic way.

The games are aimed at students with or without prior ERP-knowledge and can be used in various course concepts.

The Idea of ERPsim

- To teach integrated business processes in SAP S/4HANA in a fun way
- Learn about ERP systems
- Leverage analytics to stay "ahead of the curve"
- Get to know BI functionality (from third party vendors)
- Prepare for a TS410 certification

Requirements for the use in teaching

- "Level 1" certification of the instructor (ERPsim Certified Instructor).
- A separate S/4HANA client from your SAP UCC
- Licenses for the learners from HEC Montréal
